

AI-POWERED HEALTHCARE

NALAM 360

AI-Powered Rural Healthcare Command Center

360° Intelligence. Better Care. Healthier Communities.

NALAM 360 is an AI-powered Healthcare Command Center that transforms fragmented rural healthcare operations into one connected, intelligent ecosystem — integrating medicine inventory, patient footfall, bed availability, doctor attendance, and disease intelligence into a single platform for real-time visibility, predictive analytics, and proactive healthcare delivery across India's PHCs and CHCs.

Made with GAMMA

THE CHALLENGE

The Reality of Rural Healthcare

Primary Health Centres and Community Health Centres serve millions of Indians daily, yet most facilities still rely on manual registers, disconnected software, and delayed reporting to manage critical operations.

Manual Operations

Healthcare professionals spend valuable time maintaining paper records instead of treating patients. Stock replenishment depends on periodic reporting rather than actual consumption, leading to shortages, overstocking, and medicine expiry.

Delayed Information

Administrators receive outdated data, making it difficult to identify shortages, manage emergencies, or optimize resources. Disease outbreaks are recognized only after many patients report similar symptoms.

Fragmented Systems

PHCs, CHCs, pharmacies, ASHA workers, and government departments work in isolated systems with minimal data sharing, leading to poor coordination, duplicated efforts, and inefficient resource utilization.

 **NALAM 360 Solution:** A unified AI-powered command center providing real-time operational visibility across medicines, beds, doctors, patients, and facilities — enabling proactive decision-making instead of reactive management.

CORE MODULES

Medicine & Patient Footfall Intelligence

NALAM 360's AI modules eliminate guesswork in resource planning, ensuring medicines are available and staff are prepared before demand peaks.

Medicine Intelligence

Continuously monitors inventory, predicts stock depletion, forecasts seasonal demand, and identifies medicines nearing expiry. Recommends redistribution between nearby PHCs and optimized procurement quantities before shortages occur — reducing emergency purchases and medicine wastage.

Patient Footfall Intelligence

Forecasts daily patient volume using AI-powered predictive analytics based on historical data, seasonal disease patterns, weather conditions, and local events. Enables facilities to prepare staff, medicines, and consultation rooms in advance — reducing overcrowding and consultation delays.

CORE MODULES

Smart Bed & Doctor Workforce Intelligence

Smart Bed Intelligence

Bed availability is often invisible to neighboring facilities, making referrals inefficient. NALAM 360 provides real-time bed monitoring, predicts occupancy trends, estimates discharge times, and recommends the most suitable referral hospital based on available beds, specialist availability, and travel distance — reducing delayed admissions and ambulance travel time.

Doctor & Workforce Intelligence

Doctor attendance and staff availability are managed independently from daily operations, making workforce planning reactive. NALAM 360 predicts staffing demand, tracks doctor availability in real time, recommends optimized shift allocation, and alerts administrators before shortages impact healthcare delivery — reducing waiting times and healthcare worker overload.

Built for Rural India

Many rural healthcare facilities operate with unreliable internet connectivity, limited digital infrastructure, and multilingual healthcare workers. Traditional cloud-based hospital management systems become difficult to use consistently in remote areas. NALAM 360 is purpose-built to overcome these barriers.

Offline-First Architecture

Operations continue uninterrupted even without internet connectivity. Data syncs automatically when connection is restored, ensuring no information is ever lost.

Multilingual Support

Supports regional languages across India, enabling healthcare workers to use the platform in their native language without barriers.

Voice-Based Reporting

Healthcare workers can document patient data, update records, and generate reports using voice commands, reducing data entry burden significantly.

Mobile-Friendly Interface

Designed for smartphones and tablets with low bandwidth requirements, making it accessible to ASHA workers and field staff across remote locations.

IMPACT

Transforming Patient Experience & Empowering Healthcare Workers

For Patients

Patients often experience long waiting times, unavailable medicines, and delayed referrals. Through predictive resource management and intelligent referrals, NALAM 360 ensures faster consultations, improved medicine availability, reduced waiting times, and better access to quality healthcare — restoring trust in public healthcare systems.

For Healthcare Workers

Doctors, nurses, pharmacists, and ASHA workers spend significant time on administrative tasks. By automating reporting, simplifying workflows, and enabling voice-based documentation, NALAM 360 allows healthcare professionals to focus on what matters most — **caring for patients**.

360°

Operational Visibility

Real-time view across all healthcare operations

1

Unified Platform

All modules integrated in a single ecosystem

0

Reactive Decisions

Proactive AI-driven recommendations replace guesswork

GOVERNANCE

Enabling Smarter Governance

Government officials often receive delayed reports, making healthcare planning reactive instead of proactive. Resource allocation becomes inefficient, operational costs increase, and emergency responses are delayed. NALAM 360's centralized AI Command Center transforms how district and state officials oversee rural healthcare.

1

Real-Time Dashboards

District and state officials access live operational data across all PHCs and CHCs — eliminating reporting delays and enabling immediate intervention when issues arise.

2

Predictive Analytics

AI-powered forecasts for medicine procurement, disease surveillance, and workforce planning allow officials to allocate resources before shortages occur rather than after crises develop.

3

Data-Driven Policy

Comprehensive district-wide healthcare intelligence supports evidence-based policy decisions, budget planning, and performance monitoring across the entire public health network.

THE VISION

The Future of Public Healthcare

Imagine a healthcare system where every PHC is connected, every medicine is tracked, every doctor is supported, every bed is visible, every patient receives timely care, and every healthcare decision is backed by Artificial Intelligence.

Connected

Every PHC and CHC linked in one intelligent ecosystem

Tracked

Every medicine monitored from procurement to dispensing

Supported

Every healthcare worker empowered with AI recommendations

Visible

Every bed and referral pathway in real time

Timely

Every patient receiving care when they need it most

NALAM 360 transforms India's public healthcare ecosystem from fragmented operations into one connected intelligence network — empowering healthcare workers, optimizing government resources, and improving patient outcomes across every community.

NALAM 360

360° Intelligence. Better Care. Healthier Communities.

"Because every community deserves healthcare that thinks ahead."

Predict

Anticipate medicine shortages, patient surges, and disease outbreaks before they happen

Prepare

Equip healthcare facilities with the resources, staff, and intelligence they need in advance

Connect

Unite patients, healthcare workers, hospitals, and government in one intelligent ecosystem

Learn

Continuously improve healthcare delivery through AI-driven insights and adaptive intelligence
